# Cleaning Instructions

**Routine maintenance will ensure the very best in filtered water - Recommended every 4 weeks.**

This process takes approximately 5 minutes & will ensure the very best water quality.

## HOW TO CHANGE YOUR FILTER

Included in this mail out to you are the following items that you will need to successfully change your Aussie Water filter.

### These items are:

- One cloth filter made up of two layers, one being white & the other black
- One large plastic multi layered cartridge filter
- One sticker with a reminder month written on it with your next filter due date
- This letter plus an instruction sheet on how to dismantle your bottle assembly
- Your receipt for your payment of this filter.

### Procedure:

- Follow the instructions as provided on the enclosed care instructions sheet to dismantle your bottle assembly
- Open up the dome section and take out the wagon wheel looking section allowing you to access the cloth filter
- Remove the cloth filter and replace with the new cloth filter with the white side facing upwards
- Place the wagon wheel section back on top of the cloth filter and close the dome back together
- Unscrew the old filter from the white plate as pictured and discard
- Remove the new filter cartridge from the box and run under cold water for several minutes
- This process removes the excess carbon dust from the charcoal sections of the filters
- To speed the process up hold the filter in one hand and then cup your other hand over the top of the new filter and smack the top of the filter 4 times and place it under the water again and repeat
- This procedure forces the water through the filter faster and therefore flushes the excess carbon dust through quicker
- Continue this process until the water coming out of the bottom of the filter is clear
- Now screw the new filter firmly (not too tight) back on to the white plate being careful not to cross thread the filter
- Follow the remainder of the instructions page to put your bottle section back together again
- Place your new "Due Date" sticker on the front of your machine just above the digital display to help you to remember when your next filter is due.
